

# AGC Tool Box Safety Talk

## RIGGING FAILURES

### INTRODUCTION

1. Review any accidents or “near accidents” from the past week.
2. Describe the hazards of the work as they relate to your project. Explain or show the SAFE way of doing the job.
3. Give the TOOL BOX SAFETY TALK

Every year, workers lose their lives as a result of improper rigging or rigging failure that allowed a load to fall while being hoisted. Some deaths occur when the load slips from the rigging, when the rigging breaks and allows the load to fall, and when the load breaks into pieces and falls while being lifted. Always exercise caution when working around cranes.

- Inspect all rigging prior to use to minimize the possibility of rigging failure. Look for hazardous conditions such as wire rope deformation, strain, binding, or kinking.
- Do not wrap hoist lines around the load.
- Know the rated capacities of rigging and slinging and use the proper size.
- Ensure that loads are rigged to minimize the potential for dropped loads.
- Do not exceed the load chart capacity while making lifts.
- Determine a safe location to stand to avoid being struck by the load if rigging fails, or the load shifts while making lifts.
- Do not walk or work under overhead loads.
- Watch sharp corners on loads when using synthetic slings.
- Do not tie knots in synthetic slings.

# TOOL BOX SAFETY TALK – Week 14

## TOPIC: RIGGING FAILURES

To be **Completed** during the week of 03/26/2012  
 Please **Return** to the Safety Department by 04/02/2012

Safety Fax: 480-726-0277
