

AGC Tool Box Safety Talk

INSPECTING FALL PROTECTION SYSTEMS

INTRODUCTION

1. Review any accidents or “near accidents” from the past week.
2. Describe the hazards of the work as they relate to your project. Explain or show the SAFE way of doing the job.
3. Give the TOOL BOX SAFETY TALK

Regular and proper inspection of components of Personal Fall Arrest Systems (PFAS) is mandatory. When inspecting a PFAS, consider the following:

- Inspect PFAS before each use for wear, damage, and other deterioration, and remove defective components from service.
- Look for faulty connectors (D-rings, snap-hooks etc.)
- Before each use check lanyards, static lines, and body harnesses for tears, cuts, frays, or other damage, that could limit the integrity of the system.
- Make sure anchorage points are secure.
- If equipment looks as if it needs repair – or it is time for maintenance – tag it, “Do not use,” and remove it from service.
- Keep fall protection equipment as clean as possible to facilitate inspection of the equipment.
- Store in a clean, dry place.

TOOL BOX SAFETY TALK – Week 5

TOPIC: INSPECTING FALL PROTECTION SYSTEMS

To be Completed during the week of 01/23/2012
 Please Return to the Safety Department by 01/30/2012

Safety Fax: 480-726-0277
